

About Checkmarx

Checkmarx was founded in 2006 with the support of Naiot Venture Accelerator and the Ofer Hi-Tech Group, with the vision of providing a comprehensive solution for automated Security Code Review. The company pioneered the concept of a query-language-based solution for identifying technical and logical vulnerabilities in the code with virtually zero false-positives. Checkmarx's technology is used by developers and R&D departments in large and medium size companies worldwide. Checkmarx is the leading provider of the new generation security software Source Code Analysis solutions, offering a virtually zero false-positives technology combined with a unique business logic vulnerability identification method based on its proprietary query language and search engine. The Checkmarx CxSuite™ facilitates the enforcement of regulatory compliance requirements including internal company policies throughout the Software Development Life Cycle. Checkmarx has developed a growing network of strategic partnerships with industry leaders worldwide, understanding the value of providing integrated, comprehensive solutions and expert support to protect companies from the threats posed by security flaws in software applications. Checkmarx recently released its products to Fortune 1000 and mid-size companies within the Defense, Financial, Telecommunication, Government, and Military industries as well as to largest Independent Software Vendors.

“Our customers efficiently address the challenge of securing the code while cutting down on time and costs. By seamlessly integrating into the (SDLC), Checkmarx's automatic code review suite enables organizations to identify, track and help fix technical and logical security flaws from the root: the source code. They now have access to complete secure code development support and guidance for their application portfolios. Organizations can assimilate corporate standards to expand and adapt the CxSuite to their specific environments, making it an invaluable asset for secure code and software development” said Assaf Pilo, Director of Sales and Marketing, Checkmarx.

Checkmarx Products

CxAudit

Checkmarx CxAudit was designed as the most accurate source code security solution for application auditors. CxAudit offers both hundreds of out of the box security queries and customization capabilities, designed to cover the widest range of vulnerability checks. The patented Checkmarx query language (CxQL) permits the discovery of vulnerabilities in the code, with virtually zero false-positives.

CxDeveloper

Checkmarx CxDeveloper is the most comprehensive and advanced Static Application Security Testing solution to incorporate into the SDLC. The system offers hundreds of out of the box security queries designed to cover a wide range of vulnerability checks, with virtually zero false-positive results. Step by step wizards guide developers, from choosing the code, to producing the most accurate and relevant results.

CxViewer

Checkmarx CxViewer is used for obtaining audit results and reviewing vulnerabilities and attacks patterns. CxViewer enables flow analysis and vulnerability visualization viewing of

CxAudit and CxDeveloper scan results. The system allows developers to load scanned projects and investigate detailed results such as security vulnerabilities, business logic attacks, and coding practice compliance.

CxManager

CxManager provides a framework for CxDeveloper, CxViewer and CxAudit, Checkmarx's leading SAST solutions. CxManager allows keeping track of security threats found in the source code and assess their severity and importance to R&D projects.

CxManager collects security information based on CxDeveloper and CxAudit code review results. Textual and graphic reports provide in-depth analysis of the information collected, which allow accurate identification of vulnerabilities in the source code and necessary remediation measures that are required for fixing the code.

Partners

Checkmarx has established a growing network of strategic partnerships with industry leaders, and provides its products through its value-added distributors and resellers network in the US and Europe.

Checkmarx's partners provide a range of security services, including application threat modeling, compliance auditing, application penetration testing, and independent source code audits, using the state-of-the-art Checkmarx CxSuite components.

Customers

Checkmarx technology has been adopted and implemented by strategic customers in multiple verticals; Telecomm & Communication, High-tech Independent Software Vendors, Government and Defense, Security Auditors and Code Reviewers.

Collaboration with the Israel Export Institute

Checkmarx is collaborating with the Software Department of the Israel Export Institute by participating in marketing activities both in the US and in Europe. This collaboration has brought awareness to major customers abroad with regards to Checkmarx unique technology and products.
