

Rapid7 & Checkmarx

Checkmarx and Rapid7 have partnered to deliver an unparalleled hybrid of Static and Dynamic testing solutions, supporting you in fully protecting your applications beginning from the earliest stages of development right through to production.

By leveraging Checkmarx's CxSAST alongside Rapid7's solution, you'll be extending your security posture across the application lifecycle, leading to quicker remediation, lower costs, and tighter overall security. Enable every part of your team to maximize your applications' potential by ensuring its security at all times – along with the confidence that comes with utilizing two best of breed application security testing solutions.

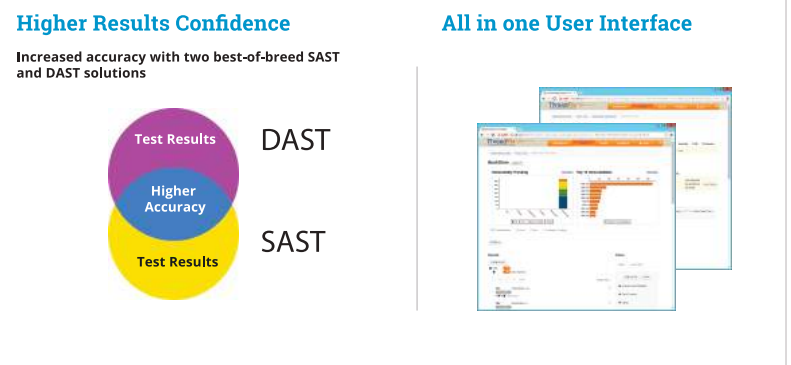

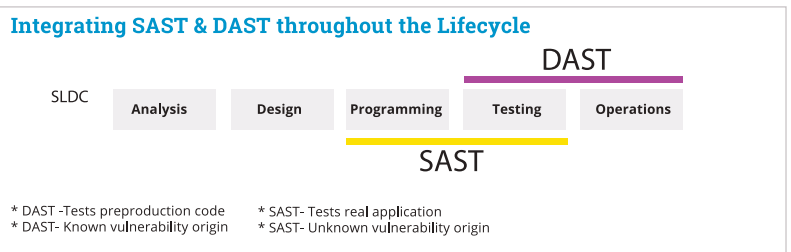

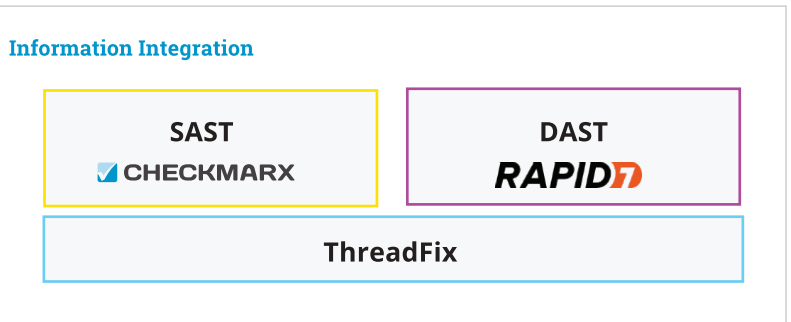

The integration between Rapid7 and Checkmarx offers:

Comprehensive analysis of your codebase with a robust, interactive application security testing solution, providing maximum coverage and efficiency through an innovative combination of automated Static and Dynamic security testing. With our tightly integrated and complementary solutions, you benefit from increased security throughout the Software Development Life Cycle (SLDC) and during runtime.

Customers leveraging this best-of-breed integration are well-equipped with the combined efforts of Checkmarx and Rapid7, each offering painless, precise platforms with unified, unparalleled support for your team.

Highly-accurate, consistent results paired with actionable insights via a combined, user-friendly dashboard for both platforms.

With the power of the ThreadFix dashboard, customers see one unified view of their application's security state. Automating the merging of scan results increases productivity and visibility and improves communication between teams. Results for both platforms are also stored forever in your repository for later analysis.

About Rapid7 Rapid7 cyber security analytics software and services reduce threat exposure and detect compromise for thousands of organizations, including 34% of the Fortune 1000. From the endpoint to cloud, Rapid7 provides comprehensive real-time data collection, advanced correlation, and unique insight into attacker techniques to fix critical vulnerabilities, stop attacks, and advance security programs.
