

ThreadFix & Checkmarx

Checkmarx has partnered with Denim Group to offer a comprehensive view of your application security testing results, allowing organizations to eliminate software risk from the first stages of the Software Development Life Cycle (SDLC).

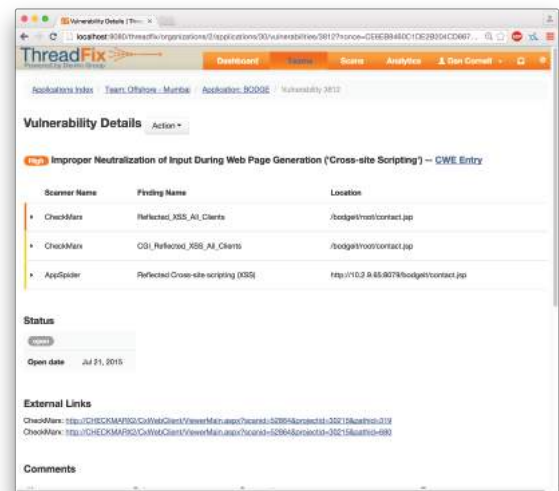

By pairing Checkmarx CxSAST's powerful static application security testing tool with Denim Group's Threadfix dashboard tool, customers enjoy highly-accurate, consistent results paired with actionable insights. Extending their coverage by leveraging the power of multiple application security testing tools enables customers to easily prioritize high-risk issues, cut down on false positives, and quickly distribute relevant security information to all application stakeholders.

The Integration of Checkmarx and ThreadFix Provides:

- Consolidate, de-duplicate and merge application security testing results from over 30 scanning tools and manual assessments. This integration enables customers to easily funnel results from CxSAST, along with other security testing, into one hybrid analysis mapping tool, validating disparate security testing results and eliminating time-consuming manual test-correlation, freeing up time to remediate high-risk security issues.
- Enjoy faster vulnerability remediation with easy issue prioritization and the ability to send vulnerability data to the defect tracking and change management tools used by software development teams. Application vulnerabilities discovered through CxSAST and your suite of security testing tools are quickly consolidated and translated into software defects and sent to development teams through the tools they already use, enabling the reduction of false positives and faster fixes on the real security issues.
- Powerful reporting and analytics allow for smart remediation decisions, based on data and risk analysis, and the ability to generate user-friendly compliance and progress reports for management and other application stakeholders. One centralized dashboard provides accurate data and analysis for vital tracking requirements, including mean-time-to-remediate and vulnerability windows across your application portfolio.

ThreadFix Vulnerability Management with Checkmarx Results:

How CxSAST Integrates with ThreadFix:

About Denim Group Denim Group develops secure software, helps organizations assess and mitigate risk with existing software, and provides training on best practices in software security. The company built ThreadFix to bridge the gap between security and software development teams by aggregating vulnerability test results from static and dynamic application security scanning tools.

About Checkmarx Checkmarx has established itself as a leading developer of Application Security testing solutions, best known for its Static Application Security Testing (SAST) solution. The company's customers include 4 of the world's top 10 software vendors and hundreds of Fortune 500 and SMB organizations from all industries.
